EXAMINER

SETH, MANAV

ART UNIT PAPER NUMBER

2624

DATE MAILED: 04/04/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/869,293	YOSHIDA, KOUJI	
	Examiner	Art Unit	
	Manav Seth	2624	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 January 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 and 24-36 is/are pending in the application.
- 4a) Of the above claim(s) 12-22 and 24-34 is/are withdrawn from consideration.
- 5) ☒ Claim(s) 1-4, 9 and 10 is/are allowed.
- 6) ☒ Claim(s) 5, 11, 35 and 36 is/are rejected.
- 7) ☒ Claim(s) 6-8 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to the Amendment

1. Amendment filed on 26 January 2006 has been entered in full.
2. Applicant's amendments and arguments with respect to the claims have been fully considered but are moot in view of the new ground(s) of rejection(s).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 5, 11, 35 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Andrews, U.S. Patent No. 3,191,149, further in view of Chau et al., U.S. Patent No. 5,859,698.

Regarding claims 5, 11, 35 and 36, Andrews disclose a first step of performing template matching between the registered template and a newly measured waveform (figure 34 and 35a, waveform signal generation; col. 2, lines 52-58, registered template: reference pattern and a newly measured waveform: specimen). Andrews further discloses a second step of generating a new waveform template based on a plurality of waveforms including the signal waveform used for generating the registered template and the newly measured signal waveform, and replacing the

registered template with the new template (col. 2, lines 52-58, where the new reference template (new waveform template) is obtained by alteration which is based on the function of the deviation between the plurality of waveforms such as the specimen (newly measured waveform) and the reference pattern (registered template)). Andrews further discloses that when the specimen font or quality changes, the identification system automatically alters reference storage to accommodate the changing system input (col. 5, lines 11-15) that conforms to that “the first step and second step would sequentially be repeated” when the specimen change is identified.

Andrews does not provide the teachings where a new waveform template (reference image) is generated based on the plurality of the waveforms (images). However, generating a reference image using a plurality of images is very well known in the art and Chau further supports this well known technique. Chau discloses automated image processing techniques in which a computer based processing system is first trained using a reference (registered) image, to create an edge enhanced reference (registered) template (col. 2, lines 28-32). Chau further disclose the generation of the reference (registered) template based on the plurality of images (figure 1; col. 4, lines 1-30). Chau discloses performing template matching between the reference (registered) template and a newly measured waveform (image signal) (col. 4, lines 42-54). Therefore, it would have been obvious for one of ordinary skill in the art at the time of invention was made to use Chau’s teachings of generating a reference image (template) based on the plurality of images (waveforms) in the invention of Andrews because both prior art references provides the teachings of being used in the same field of pattern matching and Chau further teaches that the use of multiple images to form a reference template would reduce the possible number of false signals (col. 4, lines 22-30).

Allowable Subject Matter

Reasons of Allowance:

5. Claims 1-4 and 9-10 are allowed.

The following is an examiner's statement of reasons of allowance:

The reasons of allowance should be evident from the previous office action mailed on 08/31/2005. The instant invention is directed to a template matching method for performing template matching on a waveform of a signal (image signal), a value of the signal varying according to at least a parameter which further includes estimating an occurrence probability distribution of signal values based on the plurality of measured signal waveforms and further generates (a) a waveform template including an expected value of signal value at each value of the parameter and (b) a probability template and then performs template matching between newly measured signal waveform and the waveform template (generated in step 2) by using the piece of occurrence probability information of each of expected values. The closest prior art (Peppers et al., U.S. Patent No. 5,016,981) teaches optical pattern matching between the input image and reference patterns where each projection data is determined according to the probability distribution. The closest prior and the prior art of record does not teach the limitation: generating (a) a waveform template including an expected value of signal value at each value of the parameter and (b) a probability template and then performs template matching between newly measured signal waveform and the waveform template (generated in step 2) by using the piece of occurrence probability information of each of expected values as recited in claims 1 and 9. Therefore claims 1 and 9 are allowed. All other claims dependent on claims 1 and 9 are allowed at least by dependency on claims 1 and 9.

6. Claims 6-8 are objected to as being dependent upon a rejected base claim 5, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Similar reasons of allowance apply to claims 6-8 as applied to claims 1 and 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Hamashima et al., U.S. Patent No. 5,479,537, discloses a method and apparatus for pattern mapping.
- Evan et al., U.S. Patent No. 4,179,693, discloses updating reference pattern based on the reference and newly measured image.

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the

Art Unit: 2624

THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manav Seth whose telephone number is (571) 272-7456. The examiner can normally be reached on Monday to Friday from 8:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh Mehta, can be reached on (571) 272-7453. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
